

Hi, I'm Haomin LUO

I am a PhD student in the [Department of Engineering](#) at the [University of Cambridge, St. John's College](#). Prior to this, in 2024 I earned my master's degree in AI and Energy from the [Hong Kong University of Science and Technology](#) (GPA 3.96, top 1%), where I received the excellent Student Scholarship. Currently, I'm taking a gap year until Jan 2027 and based in Shanghai.

My professional background spans both engineering and finance: I worked as an assistant engineer at [AECOM](#) (2021–2022), earning the “Most Valuable Player (MVP)” award. Between 2021 and 2023, I interned in the TMT group of [Huatai Securities](#), and [Soochow Securities](#) focusing on equity investment, and also provided consulting services for private equity / venture capital (PE/VC) institutions in the primary market at [Meritco Services](#).

My research centers on **AI and energy**, specifically **Multi-Agent Reinforcement Learning (MARL)**. I investigate agents' communication, collaboration, robustness and overall explainability. My prior work mainly adopted RL as a data-driven, model-free control paradigm for time-series data, applying it to demand response scheduling in power systems including microgrids, virtual power plants (VPPs), and photovoltaic-energy storage systems. Now, my research interests lean more toward RL in energy finance, especially quantitative trading within electricity markets.

Beyond academia, I also work in the fashion industry as a professional model. My mother agency (MA) in China is [Lacoco Models Management](#), and my past work includes commercial campaign shoots and runway shows.

Best,

Haomin
